Test Analyst

Description

mindX360 Technologies is a startup of IT services, specializing in digital transformation and enterprise integrations. With a commitment to innovation, excellence, and customer satisfaction, we help businesses leverage technology to achieve their goals and stay competitive in today's dynamic marketplace.

mindX360 Technologies uses a combination of technology innovation and in-depth subject-matter, consulting, and advising knowledge to tackle complex business problems.

Our global cross-functional teams collaborate to develop end-to-end delivery, design, and strategic solutions.

We provide the best technology for rapid integration, digital evolution, application development, and strategic assistance to businesses in need of digital transformation services like Legacy Modernization, Business Automation, Cloud Transformation, etc.

We care about the ultimate business benefit and customer experience as much as our customers do in each one of our relationships.

Job Description:

We are seeking for a highly motivated and experienced Test Analyst with strong understanding of Agile principles, different kind of testing frameworks, and a proven track record of working with cross functional teams in a fast-paced environment. The person will be responsible for evaluating software applications, test through multiple phases, identifying bugs, and ensuring the quality and functionality of the project before production deployment.

Experience:

Total experience between 03-05 years, having minimum of 2 years hands-on experience on testing.

Responsibilities

- Total experience between 03-05 years, having minimum of 2 years hands-on experience on testing.
- Maintain professional communication and coordination between cross-functional teams during all the phases (discovery, design, development, testing, business user testing, stake holders' engagement)
- Adapt best testing practices for Agile/Scrum based projects
- Perform manual and automated testing on various software applications and systems as per project requirements
- Identify, record, and document bugs and issues using bug tracking tools (e.g., Jira, Bugzilla)
- Knowledge of SQL and ability to work with databases is much needed
- Prepare test cases, test scenarios, test plans for the respective phase of the project
- Conduct regression, integration, system, and user acceptance testing (UAT)
